

## Temperature Data for SWAT

Posted by mdnewton - 2008/10/30 21:11

---

When not using the simulated temperature data for SWAT, I was unable to find where the specified format for the data is located. I know I need max and min daily temperature data in degrees celsius, but if someone could please let me know what format it needs to be in. Thanks. - Michael

Take a look at the SWAT manual, either the SWAT2005 Input/Output File Documentation or the SWAT2000 User's Manual (the format hasn't changed between versions), available at <http://www.brc.tamus.edu/swat/doc.html>. Alternatively, just mimic the format of the temperature files from the tutorials (sp60\_73.tmp or vegas49\_87.tmp available in the datafiles/precip/ directory).

The general format is year, day of year, max temp for the day, min temp of the day, but you'll want to look at the manual or the tutorial data to get the formatting right.
